Analytics Applications for Enhancing Student Learning Experience

CSEIT 2019

If used effectively, analytics technology can enhance curriculum design and both live and online learning sessions. In this talk I will address three areas of application of analytics techniques: analysing curriculum and course design; analysing student feedback; and analysing live and online classroom discussions.

Venky Shankararaman is a Professor of Information Systems (Education) and Deputy Dean (Practice & Education) at the School of Information Systems, Singapore Management University. He holds a PhD in Engineering from the University of Strathclyde, Glasgow, UK. His current areas of specialization include digital business technologies (e.g. analytics, cloud, AI, IoT) and transformation, enterprise systems and integration, and education pedagogy. He has over 25 years of experience in the IT industry in various capacities as a researcher, academic faculty member, IT professional and industry consultant. Venky has designed and delivered professional courses for government and industry in areas such as digital business, business process management and analytics, enterprise architecture, technical architecture, and enterprise integration. He has published over 75 papers in academic journals and conferences.
